INTRODUCTION

Read this instructions carefully before installation. All operations must be carried out by qualified personnel following the instructions.

The user must periodically inspect, based on the conditions of use and the substances used, the presence of corrosion, dirt, the state of wear and correct function of the valves.

Always observe first the operating conditions given in datasheet of the valve.

HYDRAULIC FLUID

Observe the recommendations given in the data sheet of the valve. Use only mineral oil (HL, HLP) according to DIN 51524. Use of other different fluids may damage the good operation of the valve.

VISCOSITY

Observe the recommendations given in the data sheet of the valve. The oil viscosity must be in the range of 10 mm²/s to 500 mm²/s.

Recommended oil viscosity 46 mm²/s (32 mm²/s for Cartridge valves)

Table 1: ISO viscosity grades

Viscosity grade	Average kinematic viscosity mm ² /s @ 40°C	Kinematic-viscosity limits mm ² /s @ 40°C	
		min.	max.
ISO VG 10	10	9.00	11.0
ISO VG 15	15	13.5	16.5
ISO VG 22	22	19.8	24.2
ISO VG 32	32	28.8	35.2
ISO VG 46	46	41.4	50.6
ISO VG 68	68	61.2	74.8
ISO VG 100	100	90.0	110

= Values used in the chart "Oil viscosity according to temperature"

OIL VISCOSITY ACCORDING TO TEMPERATURE

CONTAMINATION

Oil contamination is the main cause of faults and malfunction in hydraulic systems. Abrasive particles in the fluid erode or block moving parts, leading to system malfunction.

The valves we are offering do not require filtering characteristics any higher than those needed for usual hydraulic components such as pumps, motors, etc.

However, accurate filtering does guarantee reliability and a long life to all the system's hydraulic parts. Reliable performance and long working life for all oil-pressure parts is assured by maintaining the level of fluid contamination within the limits specified in the data sheet of the valve.

Hydraulic fluid must also be cleaned properly before filling the hydraulic circuit, especially when commissioning a new system, as this is when the oil contamination generally peaks due to its flushing effect on the components, and the running-in of the pump.

Maximum contamination level is required on datasheet of the valve according to ISO 4406:1999.

In the following table there is the correspondence between ISO 4406:1999 and old standard NAS 1638 for information purpose:

The standard ISO 4406:1999 defines the contamination level with three numbers that relate with the number of particles of average dimension equal or greater than 4 µm, 6 µm e 14 µm, in 1 ml of fluid.

In following table there is a reference to recommended contamination level and correspondence with old NAS 1638 standard.

Table 2: Recommended contamination level.

Type of system Type of valve	Oil filtration recommendations		
	Cleanliness class recommended		Absolute filtration micron rating (**)
	ISO 4406 : 1999	NAS 1638 (*)	
Systems or components operating at HIGH PRESSURE > 250 bar (3600 psi) HIGH DUTY CYCLE APPLICATIONS Systems or components with LOW dirt tolerance	18 / 16 / 13	7 - 8	5
Systems or components operating at MEDIUM / HIGH PRESSURE Systems and components with moderate dirt tolerance	19 / 17 / 14	9	10
Systems or components operating at LOW PRESSURE < 100 bar (1500 psi) LOW DUTY CYCLE APPLICATIONS Systems and components with GOOD dirt tolerance	20 / 18 / 15	10 - 11	20

* Contamination class NAS 1638: it is determined by counting the total particles of different size ranges contained in 100 ml of fluid.

** Absolute filtration: it is a characteristic of each filter, it refers the size (in micron) of the largest spherical particle which may pass through the filter.

WORKING TEMPERATURES

Ambient temperature range: -25°C to +60°C

Fluid temperature range (NBR seals): -25°C to +75°C

Thermal shocks can affect the performance and the expected life of the product, hence it is necessary to protect the product from these conditions.

SEALS

O-rings made in Acrylonitrile Butadiene (NBR) are normally fitted on the valves. The backup rings that protect the O-rings are also made in NBR, or sometimes PTFE. Both the O-rings and the backup rings are suitable for the working temperatures mentioned above.

In the case of fluid temperatures > 75°C, FKM seals must be used (identified with "V1" variant).

ELECTRICAL POWER SUPPLY

Solenoid valves coils are designed to operate safely in the voltage range of $\pm 10\%$ of nominal voltage at max. 60°C ambient temperature. The combination of permanent overvoltage and very hot temperatures can stress the solenoid. Therefore always a good heat dissipation and voltage level has to be assured. Faulty coils may only be replaced by new, interchangeable, tested compo-

nents in original-equipment quality.

Before removing a coil, voltage must be disconnected.

When replacing the coil, be aware to insert O-Rings in order to avoid the entrance of water.

INSTALLATION

The mounting surface must feature surface quality specified in data sheet of the valve: for example for Cetop valves generally is required $Ra \leq 1.6\mu m$ and flatness $\leq 0.03 mm$ over 100 mm length. Normally in cartridge valve for sealing diameters of the cavities, is required roughness $Ra \leq 1.6\mu m$. The surfaces and openings in the assembly plate must be free from impurity or dirt.

Make sure the O-Rings fit correctly in their seats.

Fixing screws must comply with the dimensions and the strength class specified in the data sheet and must be tightened at the specified tightening torque.

Complete the electrical wiring. For circuit examples and pin assignments, see the relevant datasheet.

USE AND MAINTENANCE

Observe the functional limits indicated in the technical catalogue

On a periodic basis and based on the conditions of use, check for cleanliness, state of wear or fractures and correct performance of the valve.

If the O-rings are damaged, replace them with those supplied by the manufacturer.

To assure the best working conditions at all time, check the oil and replace it periodically (after the first 100 working hours and then after every 2000 working hours or at least once every year).

Attention: all installation and maintenance intervention must be performed by qualified staff.

TRANSPORT AND STORAGE

The valve must be handled with care to avoid damage caused by impact, which could compromise its efficiency.

In the case of storage, keep the valves in a dry place and protect against dust and corrosive substances.

When storing for periods of more than 6 months, fill the valve with preserving oils and seal it.

CONVERSION CHART

Type	SI units		Alternative units		Conversion factor
Force	Newton	(N) [kgm/s ²]	Kilogram force	(kgf)	1 kgf = 9.807 N

PRESSURE RELIEF VALVES

DIRECT ACTING PRESSURE RELIEF VALVES (FOR HPV VALVES)

1

HYDRAULIC SYMBOL

The direct acting relief valve limits the pressure in a hydraulic circuit to within the specified calibration range. It has a galvanised steel body. The tapered poppet is in tempered steel.

HYDRAULIC FEATURES

Max. working pressure	400 bar
Max. Flow	5 l/min
Hydraulic fluid	DIN 51524 Mineral oils
Fluid viscosity	10 ÷ 500 mm ² /s
Fluid temperature	-25°C ÷ 75°C
Ambient temperature	-25°C ÷ 60°C
Max. contamin. level class with filter	ISO 4406:1999 - class 19/17/14
Weight	0.038 kg
Tightening torque	see draw
Cavity (M14x1.5)	CN032005 (See section 17)

ORDERING CODE

Code	Description
RKVL1130002	Direct acting relief valve

PRESSURE-FLOW RATE

MIN.SETTING PRESSURE

Fluid used: mineral based oil with viscosity 46 mm²/s at 40°C.

DIRECT ACTING PRESSURE RELIEF VALVES (FOR POWER PACKS SERIES MR/MW)

HYDRAULIC SYMBOL

ORDERING CODE

Code	Identification (see draw)	Setting range	Pressure increasing at each turn of screw
21000010.000	A	25 ÷ 80 bar	17 bar ± 10%
21000011.000	B	75 ÷ 220 bar	45 bar ± 10%
21000009.000	C	5 ÷ 30 bar	7 bar ± 10%

The direct acting relief valve limits the pressure in a hydraulic circuit. It raises the safety level by making it impossible for the plant operators to set a higher pressure rating, than that specified in the catalogue. It has a pack spring with a mechanical stop. It has a galvanised steel body. The guided ball poppet is in tempered and ground steel.

HYDRAULIC FEATURES

Max. working pressure	220 bar
Setting range:	
Spring A	25 ÷ 80 bar
Spring B	75 ÷ 220 bar
Spring C	5 ÷ 30 bar
Max. Flow	6 l/min
Hydraulic fluid	DIN 51524 Mineral oils
Fluid viscosity	10 ÷ 500 mm ² /s
Fluid temperature	-25°C ÷ 75°C
Ambient temperature	-25°C ÷ 60°C
Max. contamin. level class with filter	ISO 4406:1999 - class 19/17/14
Weight	0.05 kg
Tightening torque	see draw
Cavity (M15x1)	CN033001 (See section 17)

The minimum permissible setting pressure depending on the spring: see curves below

PRESSURE-FLOW RATE

Fluid used: mineral based oil with viscosity 32 mm²/s at 50°C.

DIRECT ACTING PRESSURE RELIEF VALVES

1

HYDRAULIC SYMBOL

PRESSURE-FLOW RATE

1 = CMP02C1.. - 2 = CMP02C2.. - 3 = CMP02C3.. - 4 = CMP02C4..
Fluid used: mineral based oil with viscosity 46 mm²/s at 40°C.

MIN.SETTING PRESSURE

The direct acting relief valve limits the pressure in a hydraulic circuit. It raises the safety level by making it impossible for the plant operators to set a higher pressure rating, than that specified in the catalogue. This is limited by a pack spring with a mechanical stop (only standard screw and nut), which prevents temporary P closures caused by pressure peaks. It has a galvanised steel body. The guided ball poppet is in tempered and ground steel.

HYDRAULIC FEATURES

Max. working pressure	250 bar
Setting range:	
Spring 1 (white)	max 30 bar
Spring 2 (yellow)	max 90 bar
Spring 3 (green)	max 180 bar
Spring 4 (orange)	max 250 bar

ORDERING CODE

DIRECT ACTING PRESSURE RELIEF VALVES WITH ONE-WAY CHECK VALVE

1

HYDRAULIC SYMBOL

The valve has a combined function in a single cartridge. It consists of a direct acting maximum pressure valve and a unidirectional check valve. The relief valve raises the safety level by making it impossible for the plant operators to set a higher pressure rating, than that specified in the catalogue. It has a pack spring with a mechanical stop.

The spring in the check valve enables the cartridge to be mounted in any position.

It has a galvanised steel body. The tapered poppet of the relief valve and the guided ball poppet are made from tempered and ground steel.

HYDRAULIC FEATURES

Max. working pressure	350 bar
Max. Flow	30 l/min
Setting range: Spring 0 (white) Spring 1 (green) Spring 2 (yellow) Spring 3 (red)	max 50 bar max 110 bar max 220 bar max 350 bar
One-way check valve	0,5 bar (standard)
Check valve leakage (0 ÷ 5 drops/min)	0 ÷ 0.25 cm ³ /min
Hydraulic fluid	DIN 51524 Mineral oils
Fluid viscosity	10 ÷ 500 mm ² /s
Fluid temperature	-25°C ÷ 75°C
Ambient temperature	-25°C ÷ 60°C
Max. contamin. level class with filter	ISO 4406:1999 - class 19/17/14
Weight	0.15 kg

ORDERING CODE

DIRECT ACTING PRESSURE RELIEF VALVES WITH LOGIC VALVE

1

HYDRAULIC SYMBOL

SERVICE EXAMPLE

This valve provides two combined functions in a single cartridge: a direct acting pressure relief valve and a logic check valve that allow automatic flow to tank from port U when there is no flow on P port.

Pressure relief valve setting can be adjusted within the allowed pressure range, avoiding to increase the pressure over the maximum value. Springs into the check valve allow to assemble the valve in any preferred position and orientation.

Zinc plated steel housing, pressure relief valve's poppet made of tempered ground steel, check valve's ball made of tempered steel, steel logic valve poppet.

HYDRAULIC FEATURES

Max. working pressure	220 bar
Max. Flow	10 l/min
Setting range:	
Spring 0 (white)	max 50 bar
Spring 1 (green)	max 110 bar
Spring 2 (yellow)	max 220 bar

ORDERING CODE

SEQUENCE VALVES - DIRECTLY OPERATED (FOR MK3 SERIES POWER PACKS)

HYDRAULIC SYMBOL

3 way direct acting sequence valve feeds with 1 → 2 flow, a secondary branch of a circuit when a set pressure value is reached. While the port 3 is normally connected to tank. When the port 1 is at a lower pressure than the setting pressure, the ports 2 and 3 are connected to tank. Back pressure on port 3 adds to the valve setting. Back pressure on port 2 does not effect the valve setting when there is flow from port 1 to 2. It raises the safety level by making it impossible for the plant operators to set a higher pressure rating, than that specified in the catalogue. It has a pack spring with a mechanical stop (only standard screw and nut). The body is made of steel with nitrocarburizing treatment while the spool is made of tempered and ground steel.

ORDERING CODE

PRESSURE REDUCING VALVES WITH RELIEVING - DIRECT OPERATED

HYDRAULIC SYMBOL

The direct acting pressure reducing valve feeds a secondary branch of a circuit at a lower pressure than the main branch, guaranteeing minimum variation of the set pressure with flow alterations of up to 20 l/min.

Slight leakage is tolerated for this type of valve.

It raises the safety level with the RELIEVING system that enables fluid to pass through the valve from PR to T, preventing pressure increases in the controlled branch and protecting the load, and by making it impossible for plant operators to set a higher pressure rating than that specified in the catalogue. It has a pack spring with mechanical stop.

It has a galvanised steel body. The plunger is in tempered and ground steel.

HYDRAULIC FEATURES

Max. pressure	320 bar
Setting range:	
Spring 1 (white)	max 2 ÷ 30 bar
Spring 2 (yellow)	max 6 ÷ 70 bar
Spring 3 (green)	max 35 ÷ 130 bar

ORDERING CODE

PRESSURE REDUCING VALVES WITH RELIEVING - PILOT OPERATED

The pilot-operated pressure reducing valve feeds a secondary branch of a circuit at a lower pressure, guaranteeing minimum variation of the set pressure with flow alterations of up to 90 l/min.

Slight leakage is tolerated for this type of valve.

It raises the safety level with the RELIEVING system that enables fluid to pass through the valve from PR to T, preventing pressure increases in the controlled branch and protecting the load, and by making it impossible for plant operators to set a higher pressure rating than that specified in the catalogue. It has a pack spring with mechanical stop. It has a galvanised steel body. The plunger is in tempered and ground steel.

PRESSURE REDUCING AND SEQUENCE VALVES - IN-LINE MOUNTING

2

HYDRAULIC SYMBOLS

Reducing valve version

Sequence valve version

The CRC.1 aluminium body allows the in-line mounting connections for CVS.20 sequence and CVR.20 pressure reducing valves. In the version with pressure reducing valve the pump supply is connected to the port P, while in the version sequence valve is connected to the mouth PR.

For pressure reducing version the body is provided with a one-way check valve, which allows free flow to opposite direction (PR toward P)

For the sequence version a blind grub screw has been placed instead of a check valve.

- Mounting the blind grub screw , code **M78100013**, it is possible to transform the body from reducing valve to sequence valve.
- Mounting the blind grub screw , code **V70052204**, it is possible to transform the body from sequence valve to reducing valve.

ORDERING CODE

DOUBLE CROSS RELIEF VALVES

DOUBLE CROSS RELIEF VALVES DIRECT ACTING - IN-LINE MOUNTING

The direct acting compensator valves with CMP04 type cartridge protects the hydraulic components from impact or peaks in pressure.

It raises the safety level by making it impossible for the plant operators to set a higher pressure rating, than that specified in the catalogue. It has a pack spring with a mechanical stop (only standard screw and nut).

The body is in high-resistance aluminium and the cartridge is in galvanised steel.

HYDRAULIC SYMBOL

ORDERING CODE

Code	Type
RVLV0101160	Shuttle valve

The shuttle type cartridge valves allow taking of the highest pressure signal to the external port via displacement of ball in tempered and ground steel. There are usually employed to signal the actuator load to a load sensing pump pressure compensator. External steel body protected on surface by zinc plating.

HYDRAULIC FEATURES

Max. working pressure	380 bar
Max. Flow	10 l/min
Max. Leakage (0 ÷ 5 drops/min)	0 ÷ 0.25 cm ³ /min
Hydraulic fluid	DIN 51524 Mineral oils
Fluid viscosity	10 ÷ 500 mm ² /s
Fluid temperature	-25°C ÷ 75°C
Ambient temperature	-25°C ÷ 60°C
Max. contamin. level class with filter	ISO 4406:1999 - class 19/17/14
Weight	0.029 kg
Tightening torque	16 ÷ 18 Nm
Cavity (M16x1.5)	CN037003 (See section 17)

PRESSURE DROPS

Fluid used: mineral based oil with viscosity
46 mm²/s at 40°C.

PUMP UNLOADING VALVES

A = 1/4 BSP (RVLV1..2270)
SAE 7/16 20UNF (RVLV1..2150)

00012021 Spare seals kit

HYDRAULIC SYMBOL

The normally-closed 2-way 2-position valve is used to connect a normally pressurised branch to the outlet in order to allow fluid to flow through the valve from 2 to 1.

Tapered poppet in tempered and ground steel, released when the pilot branch X is connected to the outlet.

It has a galvanised steel body.

HYDRAULIC FEATURES

Max. working pressure	380 bar
Max. Flow	140 l/min
Max. Leakage (0 ÷ 5 drops/min)	0 ÷ 0.25 cm ³ /min
Hydraulic fluid	DIN 51524 Mineral oils
Fluid viscosity	10 ÷ 500 mm ² /s

VALVES IN ACCORDANCE WITH ATEX 94/9/CE DIRECTIVE

The CRP04X series of valves are electrically-controlled, 2-way / 2-position directional valves, available in 12V and 24V versions.

The "2" to "1" seal is guaranteed by a tapered shutter.

Available in normally open (NA) or normally closed (NC) versions.

- NA, free passage (from "2" to "1") with de-energised coil
- NC, free passage (from "2" to "1") with energised coil or "1" to "2" with de-energised coil

The valves work with the coils in DC.

These coils have separate certification marking II 2 GD Ex d IIC T6/T85°C. The coils are supplied with a three-pole lead whose wires have a section of at least 1.5 mm², length 10 mt.

Operating intermittence: ED100% if the room temperature does not exceed 40 °C. Degree of protection: IP67 according to EN 60529.

Supply voltage: must not exceed +5% / -10% of the nominal value. The sleeves are made of steel with galvanised surface protection (NC) or burnishing and nichel-plating (NA).

The CRP04X series of valves are Group II equipment, for use in areas classed for the presence of gas (category 2 G) and combustible dust (category 2 D). They are designed and manufactured according to the ATEX 94/9/EC directive, according to European standards: EN 1127-1, EN 13463-1, EN 13463-5.

The fluids used are hydraulic fluids for oil-pressure applications, such as: mineral oils, water-glycol solutions, biocompatible oils, etc.. whose viscosity ranges between 10 and 500 mm² / s.

The coil used for the CRP04X series is certified for a room temperature range of -20 °C / + 40 °C; it is used with fluid temperatures up to +40 °C.

SAFETY INSTRUCTIONS

Carefully read everything reported in the instruction sheet attached to the valves, before installation. All maintenance operations must be performed according to the manual.

The CRP04X series valves must be installed in compliance with plant and maintenance regulations for environments classified against the risk of explosion because of presence of gas (for example: EN 60079-14, EN 60079-17 or other national regulations/standards).

The valves must be connected to earth using the special anti-loosening and anti-rotation connection element.

For all safety aspects tied to the use of the coil see the relative use and maintenance instructions. The electrical appliances/components must not be opened when live.

The user must periodically control, depending on the conditions of use and the substances used, the presence of deposits, cleaning, wear and correct functioning of the valves..

All installation and maintenance interventions must be performed by qualified staff.

INSTRUCTIONS FOR A CORRECT INSTALLATION
Carry out wiring of the solenoids according to the user instructions of the relative coils (a copy is always supplied with each solenoid).

- The valves must be connected to earth using the special anti-loosening and anti-rotation connection element.
- When mounting the valve onto the base (manifold) ensure not to damage the OR sealing rings on the surface.
- For the aspects tied to the installation of the solenoids, see the relative safety instructions. The electrical components must not be opened when live.
- If it is necessary to loosen the ring nuts on the external ends of the coil to opportunely position the cable-holders, they must be tightened again to the respective tighteninging torques.

INSTRUCTIONS FOR A CORRECT USE AND MAINTENANCE

USE

- Respect functional limits indicated in the technical features section and those, where restrictive, indicated in the solenoid safety instructions.
- The oil used must be within the types envisioned by the manufacturer and its contamination level must be maintained within the indicated limits.

MAINTENANCE

- The user must periodically control, depending on the conditions of use and the substances used, the presence of deposits, cleaning, wear and correct functioning of the valves.
- If the OR sealing rings are damaged, only replace them with those specifically supplied by the manufacturer.

00012037	Spare seals kit CRD04NC

The direct acting, normally closed 2-way 2 position bi-directional electric control valve releases pressure and enables fluid to flow through the valve in both directions.

The bi-directional tapered poppet is in tempered and ground steel.

The valves work with DC coils whereas RAC coils with a connector with incorporated rectifier must be used for AC applications.

CRD0418NC - CRD0422NC: nickel-plated steel sleeve.

CRD04NC: phosphate-coating steel sleeve.

SOLENOID VALVES 2 WAY 2 POSITIONS

Connector to be ordered separately, see sect. 20

The electric valve is a 2-way 2-position bidirectional electrically controlled valve.

Slight leakage is tolerated for this type of valve.

Available in normally open (NA) or normally closed (NC) versions.

The valves work with DC coils whereas RAC coils with a connector with incorporated rectifier must be used for AC applications.

The sleeve is in galvanised steel (C2V0422NC..) or nickel-plated (C2V0422NA..). The plunger is in tempered and ground steel.

PRESSURE GAUGE SHUT-OFF - IN-LINE MOUNTING

1

2

3

4

MR.7... in line - MRA.7... at 90°

This in-line mounting shut-off is completely steel made and allows for operating pressure of up to 400 bar. Its uses is essential to protect measuring gauge in the eventuality of fluid hammer.

**MRG.7... in line with revolving nut
MRAG.7... at 90° with revolving nut**

This in-line mounting shut-off is completely steel made and allows for operating pressure of up to 400 bar. It has been designed to allow for independent mounting of the measuring gauge over a 360° angle, obviating in this way any problem relative to the gauge dimensions and mounting position. Its uses is essential to protect measuring gauge in the eventuality of fluid hammer.

ORDERING CODE

DIVERTER VALVES - IN-LINE MOUNTING

These valves allow the flow to be diverted to user points A or B by turning the control lever cursor to the left or right.

They can be the 3- or 6-way type, with closed or open centre. Iron cast body black colour, white zinc plated external parts.

HYDRAULIC FEATURES

Hydraulic fluid	DIN 51524 Mineral oils
Fluid viscosity	10 ÷ 500 mm ² /s
Fluid temperature	-25°C ÷ 75°C
Ambient temperature	-25°C ÷ 60°C
Max. contamin. level class with filter	ISO 4406:1999 - class 19/17/14

ORDERING CODE

SOFT START VALVES

SINGLE-PHASE MOTOR START VALVE - IN-LINE MOUNTING

Valve used on power units to delay system pressurisation to allow a single-phase motor to reach the required speed.
Fitted directly on the auxiliary pressure delivery line of unit 1 pumps or on the delivery branch between pump and unidirectional valve.
The body is in steel and the tapered poppet in tempered and ground steel.

HYDRAULIC SYMBOL

HYDRAULIC FEATURES

Max. working pressure	300 bar
Max. Flow	20 l/min
Min. working pressure	15 bar
Max operating frequency (with manual operated)	1 Hz
Working Temperature	-25°C ÷ 60°C
Hydraulic fluid	DIN 51524 Mineral oils
Fluid viscosity	10 ÷ 500 mm²/s
Fluid temperature	-25°C ÷ 75°C
Max. contamin. level class with filter	ISO 4406:1999 - class 19/17/14
Weight	0.14 kg
Tightening torque	25 ÷ 30 Nm

ORDERING CODE

SOFT START VALVE - IN-LINE MOUNTING

Valve used on power units to generate a flow rate ramp on the actuator to delay system pressurisation and allow the single phase motor to reach the required speed.

Fitted directly on the auxiliary pressure delivery line of unit 1 pumps or on the delivery branch between pump and unidirectional valve.

The body is in steel and the tapered poppet in tempered and ground steel.

HYDRAULIC SYMBOL

PRESSURE DROPS

Fluid used: mineral based oil with viscosity 32 mm²/s at 40°C.

HYDRAULIC FEATURES

Max. working pressure	210 bar
Flow	8 ÷ 15 l/min
Ramp up time (at 100 bar of working pressure)	600 ms
Max. Leakage at 100 bar	0.8 l/min
Operating frequency	0.7 Hz
Working Temperature	-25°C ÷ 60°C
Hydraulic fluid	DIN 51524 Mineral oils
Fluid viscosity	10 ÷ 500 mm ² /s
Fluid temperature	-25°C ÷ 75°C

Tightening torque	25 ÷ 30 Nm

11

ORDERING CODE

FLOW CONTROL VALVES

UNIDIRECTIONAL AND BIDIRECTIONAL FLOW CONTROL VALVES

Flow control valve using non compensated throttling.
The flow is reduced in one direction only, from 2 to 1, for SU valves and in both directions for SB valves.
Guarantees excellent mechanical seal with negligible leakage.
It has a galvanised steel body. The check valve guided ball poppet is in tempered and ground steel.

HYDRAULIC FEATURES

Max. working pressure	210 bar
Max. Flow	15 l/min
Hydraulic fluid	DIN 51524 Mineral oils
Fluid viscosity	10 ÷ 500 mm ² /s
Fluid temperature	-25°C ÷ 75°C
Ambient temperature	-25°C ÷ 60°C
Max. contamin. level class with filter	ISO 4406:1999 - class 19/17/14
Weight	0.022 kg
Nut tightening torque	15 Nm
Cavity (M10x1)	CN019002 (See section 17)

Max. contamin. level class with filter	ISO 4406:1999 - class 19/17/14
Weight	0.11 kg
Tightening torque	25 ÷ 30 Nm
Cavity (3/4 - 16 UNF)	CD018006 (See section 17)

PRESSURE DROPS

Fluid used: mineral based oil with viscosity 15 mm²/s at 40°C.

ORDERING CODE

UNIDIRECTIONAL COMPENSATED FLOW CONTROL VALVES

HYDRAULIC SYMBOL

PRESSURE DROPS

ORDERING CODE

The flow control valve maintains a steady flow in a single direction (1 to 2) regardless of oil pressure.

The flow is reduced by turning the screw or wheel right or left.

Slight leakage is tolerated when the control screw or wheel is screwed down completely.

It has a galvanised steel body. The compensator plunger is in tempered and ground steel.

HYDRAULIC FEATURES

Max. working pressure	250 bar
ΔP of regulation	12.6 bar
Max. Flow	29 l/min
Hydraulic fluid	DIN 51524 Mineral oils
Fluid viscosity	10 ÷ 500 mm²/s
Fluid temperature	-25°C ÷ 75°C
Ambient temperature	-25°C ÷ 60°C
Max. contamin. level class with filter	ISO 4406:1999 - class 19/17/14
Weight	0.2 kg
Tightening torque	25 ÷ 30 Nm

* Flow rate tolerance: $\pm 15\%$ up to 5 l/min, $\pm 10\%$ over 5 l/min
** Tolerance on hole ± 0.02 mm

ORDERING CODE

PRESSURE COMPENSATOR VALVE

00012035 Spare seals kit

Pressure compensator valves allow to control flow and pressure. The valve is normally closed and with external pilot additive to the spring bias pressure. When the pressure at port 1 rises above the spring bias pressure with the addition of external pilot pressure, then the valve shifts to allow flow from port 1 to port 2 connected to tank. The valve is used as a bypass for a fixed displacement pump in Load Sensing circuits or to proportionally control the speed of an actuator (see examples). The valve body is made of steel zinc coated and the pressure compensating spool is made of steel tempered and grinded.

HYDRAULIC FEATURES

Max. working pressure	250 bar
ΔP of regulation	8 - 13 bar
Input max. Flow	50 l/min
Hydraulic fluid	DIN 51524 Mineral oils

SERVICE EXAMPLE

ORDERING CODE

TWO-WAY PRESSURE COMPENSATOR VALVE

Pressure compensator type CCP maintains a constant pressure drop (Δp) regardless of downstream and up stream set pressure variation.

- Connecting a choke regulator between Pu port and Pil - piloting port - (see hydraulic scheme) it is possible to get a load independent flow regulation.
- This kind of compensator, named "meter in" (check in entrance), is suitable for application on special manifold or in line mounting bodies.

COILS

C30 - COILS 18W

Type of protection	IP 65
Number of cycle	18000/h
Supply tolerance	±10%
Ambient temperature	-30°C ÷ 60°C

Duty cycle	100% ED
Insulation class wire	H
Weight	0.141 kg

Standard (Hirschmann ISO 4400 DIN43650)

Coil		Max winding temperature (1)	Rated power	Resistance ±7% (2)	Spare code
Code	Voltage				
L	12 VDC	110 °C	18 W	7.7 Ω	M14000001
M	24 VDC	110 °C	18 W	31 Ω	M14000002
N	48 VDC	110 °C	18 W	116 Ω	M14000003
2	21.6 VDC	110 °C	18 W	27 Ω	M14000009
Z	102 VDC (3)	110 °C	18 W	578 Ω	M14000006
X	205 VDC (3)	110 °C	18 W	2627 Ω	M14000007
A	24 VAC/50 Hz	100 °C	35 VA	5.3 Ω	M14001002
J	115 VAC/50 Hz (3)	100 °C	35 VA	108 Ω	M14001004
I	230 VAC/50 Hz (3)	100 °C	35 VA	438 Ω	M14001005
F	24 VAC/60 Hz	100 °C	35 VA	3.8 Ω	M14001012
C	110 VAC/60 Hz (3)	100 °C	35 VA	92 Ω	M14001014
D	220 VAC/60 Hz (3)	100 °C	35 VA	375 Ω	M14001015

(1) Ambient temperature 25 °C - (2) Ambient temperature 20 °C

(3) The european low voltage directive is applied to electronical equipments used at a nominal voltages between 50 and 1000 VAC or 75 and 1500 VDC. In conformity with the low directive each part of the manifold or the subplate on which the valve is mounted should be connected to a protective earth with a resistance less than 0.1 ohms.

With wires (variant FK)

Coil		Max winding temperature (1)	Rated power	Resistance ±7% (2)	Spare code
Code	Voltage				
L	12 VDC	110 °C	18 W	7.7 Ω	M14000101
M	24 VDC	110 °C	18 W	31 Ω	M14000102

(1) Ambient temperature 25 °C - (2) Ambient temperature 20 °C

DEUTSCH and bidirectional integrated diode (variant CX)

Coil		Max winding temperature (1)	Rated power	Resistance ±7% (2)	Spare code
Code	Voltage				
L	12 VDC	110 °C	18 W	7.7 Ω	M14760001
M	24 VDC	110 °C	18 W	31 Ω	M14760002

(1) Ambient temperature 25 °C - (2) Ambient temperature 20 °C

C36 - COILS 22W

Type of protection	IP 65
Number of cycle	18000/h
Supply tolerance	±10%
Ambient temperature	-30°C ÷ 60°C

Duty cycle	100% ED
Insulation class wire	H
Weight	0.2 kg

Standard (Hirschmann ISO 4400 DIN43650)

Coil		Max winding temperature (1)	Rated power	Resistance ±7% (2)	Spare code
Code	Voltage				
L	12 VDC	115 °C	22 W	6.3 Ω	M14040001
4	14 VDC	115 °C	22 W	8.9 Ω	M14040009
M	24 VDC	115 °C	22 W	25.6 Ω	M14040002
V	28 VDC	115 °C	22 W	32.8 Ω	M14040008
N	48 VDC	115 °C	22 W	102 Ω	M14040003
2	21.6 VDC	115 °C	22 W	20.2 Ω	M14040000
Z	102 VDC (3)	115 °C	22 W	467.85 Ω	M14040006
X	205 VDC (3)	115 °C	22 W	1954 Ω	M14040007

(1) Ambient temperature 25 °C - (2) Ambient temperature 20 °C

(3) The european low voltage directive is applied to electronical equipments used at a nominal voltages between 50 and 1000 VAC or 75 and 1500 VDC. In conformity with the low directive each part of the manifold or the subplate on which the valve is mounted should be connected to a protective earth with a resistance less than 0.1 ohms.

With wires (variant FK)

(1) Ambient temperature 25 °C - (2) Ambient temperature 20 °C

CONNECTORS

CONNECTORS FOR CONTROL VALVES IN ACCORDANCE WITH DIN 43650 / ISO 4400

Connector	Protection level	Type	Cable gland	Code
Standard	IP65	Black color	PG09	V86 05 0002
		Grey color	PG09	V86 05 0004
		Black color	PG11	V86 05 0006
		Grey color	PG11	V86 05 0008
Lens cover with pilot light (1)	IP65	12 VAC/VDC	PG09	V86 10 0018
		24 VAC/VDC	PG09	V86 10 0012
		115 VAC/VDC	PG09	V86 10 0020
		230 VAC/VDC	PG09	V86 10 0022

(1) do not use for proportional versions

Connector	Protection level	Type	Cable gland	Code
With rectifier (1) Inlet voltage 12÷230 VAC Outlet voltage 9÷205 VDC	IP65	Black color	PG09	V86 20 0002
		Grey color	PG09	V86 20 0004
Lens cover with pilot light and rectifier (1) Inlet voltage 12÷230 VAC Outlet voltage 9÷205 VDC	IP65	12 VAC	PG09	V86 25 0018
		24 VAC	PG09	V86 25 0019
		48 VAC	PG09	V86 25 0020
		115 VAC	PG09	V86 25 0021
		230 VAC	PG09	V86 25 0022

(1) do not use for proportional versions

Connector	Protection level	Type	Cable gland	Code
With protection level IP67	IP67	Black color	—	V86 28 0001
		Grey color	—	V86 28 0002

Electrical features of connectors

Description	IP65	IP67
AC rated voltage	Max. 250 V	Max. 250 V
DC rated voltage	Max. 300 V	Max. 300 V
Pin contact nominal current	10A	10A
Pin contact max. current	16A	16A
Max. section cable	1.5 mm ²	1.5 mm ²
Cable gland PG09 - M16x1,5 Cable gland PG11 - G 1/2" - M20x1,5	Ø cable 6 ÷ 8 mm Ø cable 8 ÷ 10 mm	Ø cable 4 ÷ 7 mm —
Protection level	IP65 EN60529	IP67 EN60529
Insulation class	VDE 0110-1/89	VDE 0110-1/89
Operating temperature	-40°C ÷ 90°C	-20°C ÷ 80°C

The degrees of protection indicate is guaranteed only if the connectors were properly mounted with his original seals.

Electrical circuits
